SUMMARY

I am a highly skilled Flutter developer with over 5+ years of experience in designing and building responsive, user-friendly mobile applications. Proficient in leveraging the Flutter framework to create visually appealing, cross-platform applications for both iOS and Android. I have a strong understanding of Dart, state management solutions, and RESTful APIs to enhance application performance and user experience. I am proficient in collaborating with cross-functional teams to define, design, and implement innovative solutions. Committed to adhering to best practices in coding and application engineering to deliver high-quality software. Passionate about continuous learning and exploring new technologies to stay ahead in the dynamic mobile app development space.

EDUCATION

Faculty of Information Engineering - University of Aleppo 2019-2024
Bachelor's degree, Information Technology With GPA: (74.5%).

PROFESSIONAL EXPERIENCE

Company Smart Life	Remotely
Flutter Mobile - In it I modified the CRM web project and also the CRM application Also worked on HR and POS application - I added Firebase Crashlytics and Firebase Analysis - I added flavor to the apps I've worked on - I handled cpp files and included them within the POS flutter project	01/2025
Company ULUTECH	Aleppo
Flutter Mobile Developer	09/2021 – 01/2024
- Build applications using the TDD architecture, which makes code structured, scalable, and testable - Building the three test types (Bloc Test, Widget Test, and Integration Test). - Leveraged the bloc pattern for state management, providing a robust and maintainable solution for handling complex app states efficiently. - Integrated Firebase push notifications to drive user engagement and maintain active communication, resulting in improved user retention and interaction rates. - Enhanced application reliability by optimizing code structure and addressing potential issues, leading to a more	

stable and consistent user experience.

- Optimized application performance by implementing advanced techniques such as Lazy Loading and Asynchronous Programming, leading to faster response times and improved resource utilization.
- Integrated RESTful APIs seamlessly to enable real-time data flow and enrich the app's functionality, delivering a robust and immersive user experience.
- Building applications that contain real-time action, which speeds up user response

- Conducted thorough testing and debugging of applications to ensure functionality and performance across various devices and operating systems.
- Design high-quality, efficient code across multiple projects by committing to making the code run on different screen sizes with one code and one processing. The interface design varies based on the screen size.
- Participated in code reviews and contributed to best practices for code quality, maintainability, and scalability.
- Created engaging and responsive user interfaces, contributing to a visually appealing design that maximized user interaction and satisfaction.
- Worked closely with the design team to develop and implement user-centric features, ensuring a seamless and intuitive

FLUTTER PROJECTS

Smart HR

- An application to manage employees, their vacations and salaries, receive their students, and track their work
- It also contains the employee's contract in addition to receiving and replying to mail and displaying his working hours and other charts in a dynamic way

Link: https://play.google.com/store/apps/details?id=org.smartlife.slifehr&pcampaignid=web_share

Smart Dashboard

- An application to display custom charts according to the user's desires that may be about resources, employees, or statistics about
- Added a mechanism to see user behavior A miniature interface about the app was displayed on the mobile home screen
- A number of versions of it were built using flavor

Link: https://play.google.com/store/apps/details?id=com.smartlife.erpdashboard&pcampaignid=web_share

Smart Pos

- A POS application built based on pre-defined files in CPP , The application works offline and works with a synchronization system to upload data when the internet is available
- Contains sales invoices, returns, records, special settings reports, a view setup, and a quick selling destination

Mercato BI

- An application that facilitates medication management between warehouses and customers. The application allows users to instantly access.

- important information and transactions, and helps managers stay up-to-date with every important point in their

business.

Link: [h0ps://play.google.com/store/apps/details?id=com.mercatoadmin](https://play.google.com/store/apps/details?id=com.mercatoadmin)

Mercato Payment Collector

- This application is used by sales representatives to facilitate the collection of payments from customers. It gives sellers more control over payments that have not yet been delivered to the cashier and gives the buyer a record of all their payments to all sellers.
- I solved some problems in it and added some interfaces and other features.

Link: <https://play.google.com/store/apps/details?id=com.paymentcollector>

Alpha Store

- A local E-commerce platform with basic features and functionalities.

Link: https://play.google.com/store/apps/details?id=com.sadek.alpha_store

HUMY Customer

- The driver app from the Humy series of apps serves homemade food, I wrote a bloc test and an integration test

Link: <https://play.google.com/store/apps/details?id=com.nbs.alphameal>

Cvium App

- This app helps users to create resumes and letters of recommendation.

Link: <https://play.google.com/store/apps/details?id=com.cvium.templates.resume.builder&pli=1>

Food Manager App

- This is a windows application using flutter for admin to manage a restaurant chain .
- It is built to suit all screen size including mobile , tablet and laptop , the interface design varies base on the screen size

Software Technologies

- shared preference, bloc state management ,
- pdf, responsive framework

Kotlin PROJECTS

Todo App

Developed a task management application that allows users to efficiently schedule and organize their daily tasks. The app features a user-friendly interface for adding, editing, and removing tasks, as well as marking tasks as complete. It stores all tasks locally, ensuring data persistence and seamless access without the need for an internet connection. This project enhanced my skills in mobile app development and local storage management, while also providing practical experience in user interaction design and task prioritization strategies.

Weather App

Developed a user-friendly weather application that allows users to quickly and easily check the temperature and weather conditions in any location by simply entering the country name. The app provides real-time weather updates, forecasts, and detailed climatic information. It is designed with an intuitive interface to enhance user experience,

ensuring that users can access accurate weather data at their fingertips. Leveraged APIs for reliable weather data retrieval, and implemented responsive design principles to ensure compatibility across various devices.

Chat App

Developed a real-time chat application that facilitates seamless communication between two users. Leveraging Firebase for backend support, the app enables users to create accounts, initiate conversations, and exchange messages in a secure and efficient manner.

Professional Certifications and Relevant Courses

- The Complete Flutter Development Bootcamp with Dart.
- Flutter & Dart the Complete Guide.
- Learn Android 14 App Development From Beginner to Advanced Developer. Build Apps like Trello, 7Min Workout, Weather App.
